GAIA-appropriate incentives/policies

GAIA economics summarized in six words:

"People (and operators) respond to incentives".

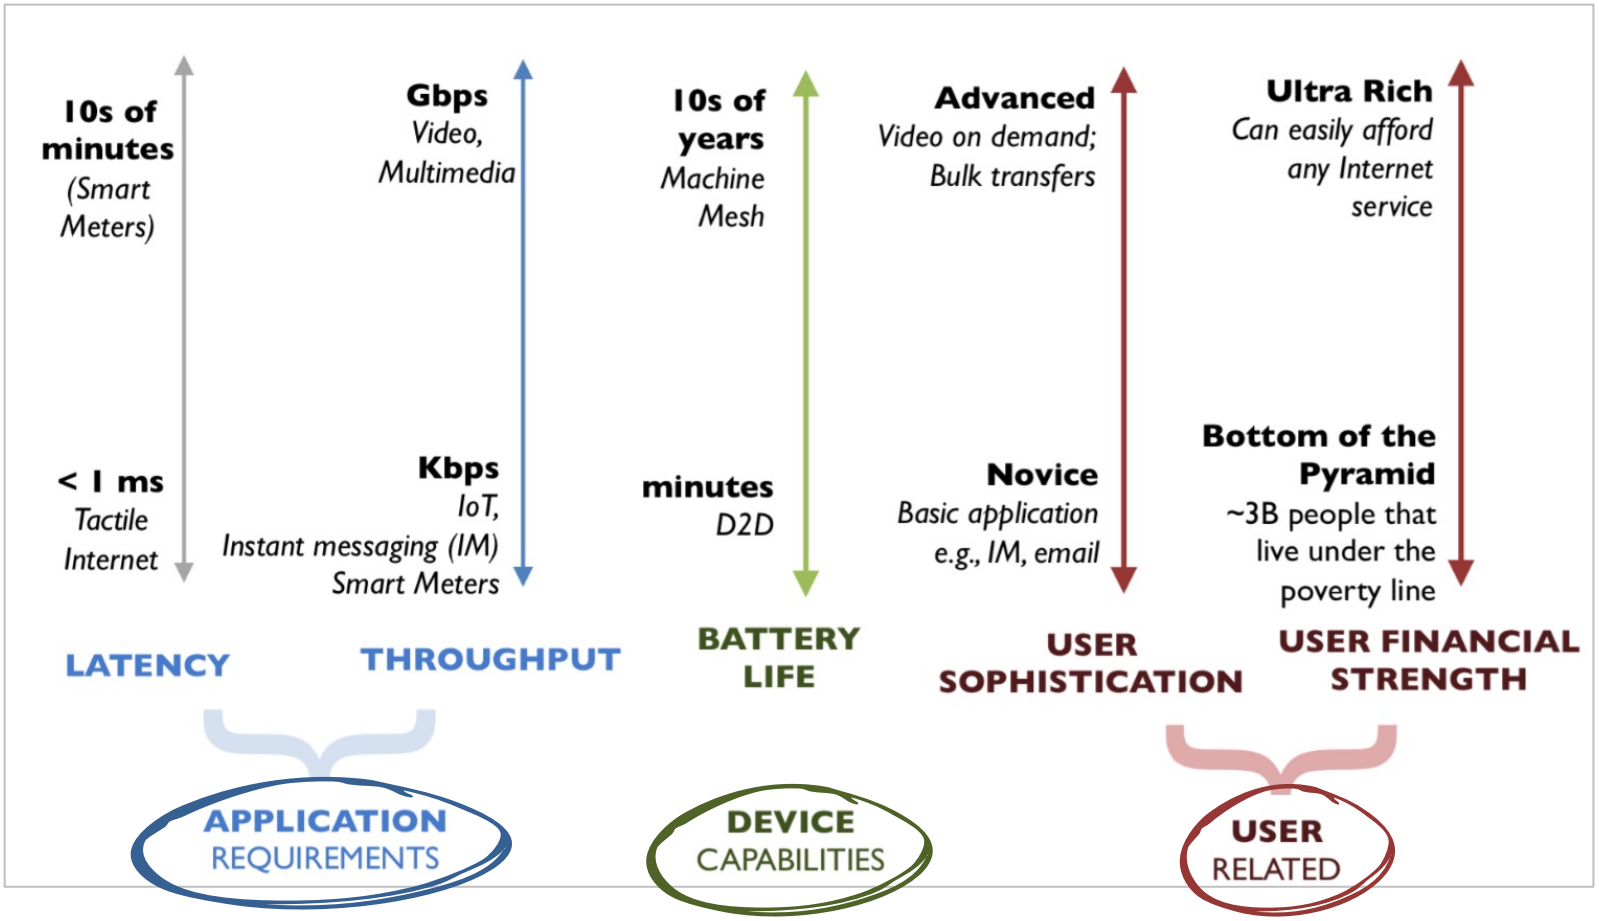

*How do we design the right incentives for all the GAIA stakeholders (so that the **users and the operators want GAIA**)?*

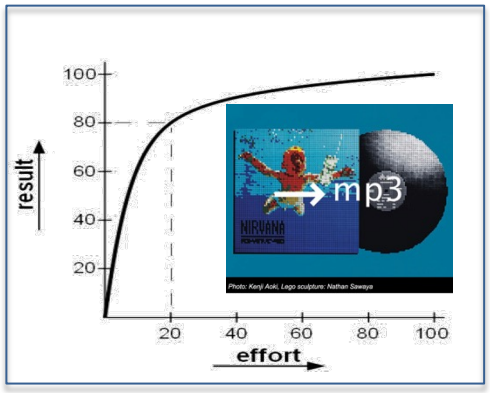

Caveat

No one-size-fits-all solution for GAIA

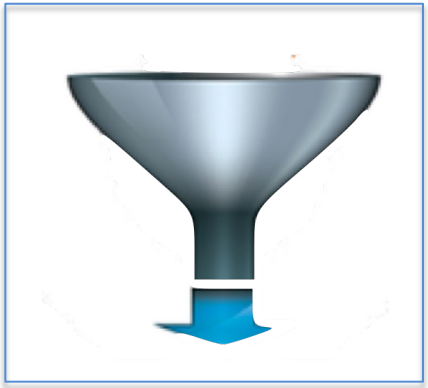

Technical ideas for ensuring GAIA

(the operator perspective)

Power of Good Enough

Context-appropriate tradeoffs

Resource Pooling

DIY networking

Inclusive Architecture

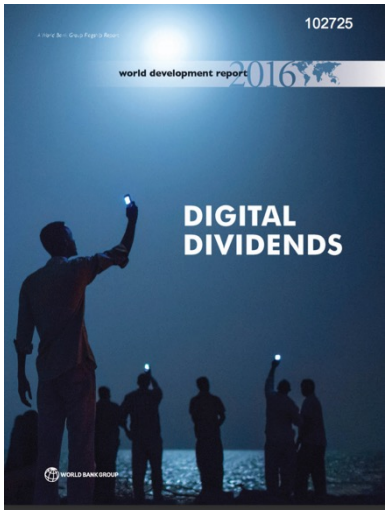

Support diverse approaches

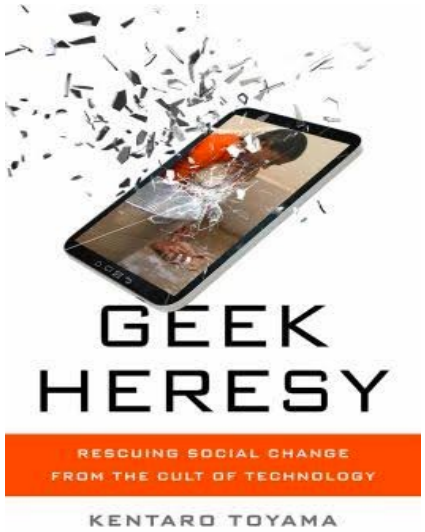

Operators should consider working with community-driven bottom-up networking

Nontechnical GAIA complements

Analog Complements:

A favorable business climate, strong human capital, and good governance is the key to GAIA (and to economic development).

Access to the internet is critical, but not sufficient.

Without strong analog complements, opportunities may turn into risks

Need to emphasize "Global Access to ***the Benefits of*** *the Internet For All"*
